its comments didnt works in github's tickets

Now i start to wonder which user-agent you spoof with?

I can (also) comment to **existing** github bug tracker items just fine.

I cannot

1) create new bug tracker items (i can reach the items "editor window", but the "Post" button never appears).  
Have to use a PC for that.

2) edit my own comments/items. The "Edit" option (from the "..." menu) does nothing on a mouse click.

3) add smileys/reactions to posts (well, i can, but the smilies to choose from aren't displayed - they are shown as rectangles/boxes, so i don't know what i'm choosing). Seems to be some kind of unsupported gfx format.

The above are all, as far as i understand, unsupported features in css/html/javascript, so nothing we can do about, unless we get a newer webkit version (i think)

I m spoofing with IPad 13.2.3 for now, since all the others have problems with one or more sites.

Even this one i have to switch back to Odyssey, if i want to attach something to an email on my providers site...
