Hi,

sorry if this thread is the wrong one for bug/improvement requests but... Tested the Odyssey beta4 and with short testing I'm really impressed, it's fast and e.g. the video stream support is very much improved compared to the OS4Depot version.

But: at Finnish Broadcasting Corporation news site <https://yle.fi/> Odyssey (both the OS4Depot and beta4) seem work oddly. The main page is shown perfectly but if I click any news item, it first loads but then clears the view and shows an empty page. What is the problem here? Using default settings (fonts downloaded with Download fonts)

Marko
