This "too wide to read" issue when using Odyssey makes Amigans.net almost unusable on an Amiga. Hopefully we can find a fix. I'm writing this to see if the "Preview" is also too wide. The preview is wrapping the text to fit the window and adjusts to the window size on the fly when I change the Odyssey window size.

I see that the above text was wrapped at 200 characters. If there is some default line wrapping setting, maybe lowering it to 80 could be a temp fix?
