Anyone Tried Compiling the latest WebKit?

It's great to see some collaboration with Odyssey Web Browser resulting in improvements.

Going forward, we will eventually need to update WebKit to a far more recent version. Websites using Bootstrap 4 tend to have layout issues, and some websites even end up being blank (e.g., if they use vue.js).

Has anyone tried compiling the latest WebKit? If so, how far did you get? [Kas1e's Odyssey build instructions and SDK](#) should help in getting started.
