There somethin wrong with AHI code in odyssey's mediaplayer, that for sure. For example, for my CMI8738 based card, i have sound, all fine, but once i move time slider, i loose sound. But on other cards other ppls didn't have that. So it can be of course driver issue, but still.

Also, you can't use with odyssey's mediaplayer ahi code at the same time many audio apps by default, and to made it works , you need to do some special setting in prefs:ahi (choice "music unit", and for that one choice only Unit 0: 16 bit blblabl, but exactly on "music unit" tab).

By all of this i think it worth to wait when someone (is Capehill still have interst in ?:) ) will rewrite that AHI part to be the same as it in all other apps.
