Looks from your video you didn't have working composited video. Or you use old radeons, or if you use HD ones, you have old version of drivers.

Quote:

No just Odyssey.

If I run for example amigaamp while Odyssey is running a box opens up saying it cant open AHI device.

The only way to fix that currently, its go to prefs:ahi (or prefs:sound) , and there choice at top tab "music unit" , and in the list above choice unit 0 exactly, not one with name of card. Then you will be able to run odyssey's mediaplayer + other apps.
