On the first problem link I get an recoverable DSI Error when scrolling with mouse wheel and reach -

"Dec 17, 2019: Westwood's Blade Runner (1997) is finally available for purchase as a digital copy"

and also a lot of disk activity before the DSI. But I only get an DSI Error the first time I visit the page, If I close the tab and visit it again no DSI Error. Only when I quit and restart Odyssey I get an error again.

On the second problem link I get no problem at all. How long should I wait?

Edit: Forget what I wrote, I too got a freeze on that second problem link.
