Hi kas1e,

I was doing some tests with odyssey 05 to watch full screen videos.

I apologize for my questions.

If I run tests on the site:

<http://www.html5videoplayer.net/index.html>

In this case "composite" is not enabled in GUI / PREFS

nor the new script "YouTube_Fullscreen_Fix.js"

and I don't even use the PatchCompositeTag

I can see the video in full screen (apart from the speed)

I don't understand if I'm converting the video or if this can be useful for viewing the video in full screen.

I can't understand why it works well in full screen

Thanks again for your work, and sorry if the question is out of context for your work.

here the video if it can be useful:
