Minor issue:

When set to the "digital" mode, the clock v53.29 does not reflect the Locale setting for the date, even if the option "Settings/Date and time format/locale" is selected.

For testing purposes I have set my country to "Austria" the date format in Workbench is similar to the ISO 8601 Date format: "2020-04-10" but Clock displays it as "Friday, 10. April 2020"
