URL:

today i spent almost all day try to connect my Sam440ep using smbfs to my linux machine.. Everytime i tried to connect to my shared directory i get an error message:

Quote:

```
smbfs: ERRDOS - ERRnoaccess (Access denied).
```

```
smbfs: Could not connect to server '192.168.1.7' (1/5, ERRDOS/Access denied).
```

but the settings (under linux/debian) are ok as I am able to connect to my shared folder with my mobile phone with android..

This is the string I use to connect under Amiga and I use the latest smbfs version available on OS4Depot (January 2020). Any idea?

Quote:

```
smbfs cache=1024 volume=condivisa Workgroup=WORKGROUP User=davide Password=mypassword  
Service=//192.168.1.7/
```
