Hi kas1e,

Thank you for answering me

and explaining many things to me

I have been fond of amiga since I was a boy

as I said I am aware of the limits of winuae, me is the only way to use Amiga for me.

I made many changes to make it pleasant to use.

I did a lot of tests before asking you for spoffing if it can possibly be included in the next version of Odyssey.

This is what works very well and is also compatible with external links that refer to youtube and also with the main youtube page.

user-agent:

"Mozilla / 5.0 (iPhone; CPU iPhone OS 12_4 like Mac OS X) AppleWebKit / 605.1.15 (KHTML, like Gecko) Mobile / 15E148 KAKAOTALK 8.7.8"

turns out to be the fastest and also a lot, and compatible with everything else.

Much better than "Android 7" or above.

Thanks again if you decide to include it, I really appreciate the work and time you are dedicating to this project.

I leave you a short video

i just installed the software enhancers i still have to configure everything especially the audio.

Keep in mind that the real speed is also limited by the software video capture program.

Thanks again, as soon as I have the opportunity I will make you a small donation for your work.

Why these projects must be supported.

They take time and work on your part.
