Odyssey 1.23 r5_beta06 - AmigaOS4

-- MediaPlayer: rewritten media player's AHI part to use AHI device API, instead of AHI library API: No exclusive locks of audio hardware from Odyssey anymore with any AHI settings! (c) Capehill

Nice work Capehill!

I am now able to use the hdaudio:HiFi 32 bit Stereo++ setting in sound preferences with the X1000's onboard sound chip. Tested playing three streaming radio stations in seperate tabs while playing a local mp3 file with AmigaAMP 3. All worked great!

Thanks once again to all for the hard work your putting into making Odyssey better!
