Are you sure its "usuall" crash ? Did you have the same kind of crash with beta05 and all previous ones ? I mean with the same "PlayerLoop" in the stack trace.

I got this one few times when add Capehill's AHI rewrite (you can read about few post in mediaplayer thread, with the same kind of stack trace). But after reboot can't reproduce it. Can't say if it something new or was there before. Test if you wish previous betas, to be sure it was there before and you have crashes with the same stack trace.

Quote:

I googled everywhere for that: "_ZN7WebCore18MediaPlayerPrivate10playerLoopEv()" line and noted that many users now and in the past had always the same kind of crash with the internal player

You mean in WebKit in whole on all platforms ?
