I just reuse your latest shared version of pixman, just with the same includes as before (like i do with Frank's ffmpeg libraries), so far all seems fine and working. Maybe only one minor thing i notice, that when there is no pixman-1.library found, instead of saying "can't open pixman-1.library" it just bring some assertion error about inability to init thing, but that not important of course, just minor thing.

Through i curious about one thing : in your configure you had "--disable-libpng". But in Odyssey visually even with that switch all seems to works still the same as before. Did you aware where exactly libpng have needs to be used in pixman build ?
