URL:

Hi,

There is a shell command or something similar  
to "restart the AHI device" after using an application.

I give an example:

Many times when I use Odyssey and then I exit the program and use immediately after E-UAE the system  
crashes "DSI"

I tried to use:

KeepAHIOpen, but it doesn't seem to work, it's probably not useful for my purpose.

Is there anything that resets the audio or associated processes without resetting the amiga system?

It is probably due to the winuae emulator.

Thanks for any help.
