Now a MUI thing maybe : I have Odyssey running on its own MUI screen. When switched to full screen, it stays on its own screen and returning to normal window goes to the Workbench screen automatically. It will not switch back to Odyssey screen even if I choose to do so directly, instead I have to choose WB screen first (the window is already there) and then its own screen.

I run Odyssey on it's own MUI screen as well and don't have this problem. For me it stays on the custom screen. Mabye it an MUI setting? I have my screen setup to be like Workbench.
