I've checked the changes between 1.252 and the current version, if 1.252 works on MorphOS but 1.270 doesn't there are only 2 possible reasons:

- A bug in the m68k emulator of MorphOS which wasn't triggered by older versions of SFS.
- Major bugs in the MorphOS exec.

Please test if [this special version](#) works on MorphOS, if it does the MorphOS exec is broken but I can work around it's bugs, if it doesn't work it's because of bugs in the MorphOS m68k emulator and I can't do anything about it.
