-- Added support for 4th and 5th mouse buttons for stepping backward (4th) and forward (5th) through the browser history. I.e same as in IBrowse.

Is there a way to disable this feature?

I have one of those mouse buttons setup to flip screens. Now, if the Odyssey window is active when I press the button to flip screens, the Odyssey page flips back to the previous page as well.

I ran across this a couple of times while posting and lost all the text I had typed in the post because I didn't realize what was going on at first. It would be nice to be able to turn off this feature. Otherwise I'll need to change my mouse button actions and I really don't want to do that as I've grown so acustom to using them.
