Looks very good, but I think it's getting a bit "massive" such category, maybe splitting to a new one and move some options there.

New category could be TOOLBAR and move there all button/"toolbar options:

Navigation button type [@|.....]

[] Show buttons frame

[] Show validation buttons

[] Show group separators

And Quick Links group too.

So it will get a less "massive" INTERFACE category.

And maybe move/include to Mouse (Button) Settings group:

[] Use contextual mouse pointers
