version SDK:Local/newlib/lib/libSDL2.so file

VERSION: Sin información de versión para "SDK:Local/newlib/lib/libSDL2.so".

1) There is no libSDL2.so in the 2.0.12 archive. If you run the installer, it will create a link called libSDL2.so though. If yours libSDL2.so is a file, where it came from? If it's a link where does it point to?

2) The shared object contains \$VER.

My conclusion is that you are using some old/wrong/corrupted .so version. Use filesize and md5sum to verify it against the archive and check also that you are using a correct archive.
