I am trying to use Wacom Intuos Tablet (CTL-4100WL).

Alexandre Balaban added support for some Wacom tablet to his driver last year, but somehow this model is not working.

I noticed Alexandre's driver is based on your UCLogic driver while checking the source codes.

Yes but he has added quite abit of code.

This latest driver diverges from the common parent abit too as the XP-Pen appears as several seprate USB devices (1 tablet 1 for buttons 1 for god knows what) unlike the UCLogic that only appears as a single device.

ALexandre is the best person to ask.
