Now there is a working 54mb WLAN solution for a Sam 440ep systems.

<http://aminet.net/package/driver/net/atheros5000>

Tested that with my Same 440ep Flex and it worked out of the box. Though I needed to add wirelessmanager manually to startup-sequence.

But seems that it need to be only configured interface on internet settings. Satarted to get DSI errors when I reconfigured Sam's own NIC.

I don't really need a wlan but it could be handy.
