are you sure you're seeing the correct catalog version?

usually this happens if the catalog file is an older than the program requires.

check the following places to be sure:

the current catalog files should be placed here (example in german)

- * SYS:locale/catalogs/german/amiupdate.catalog
- * SYS:locale/catalogs/german/prefs_updates.catalog

and they must NOT be placed here:

- * SYS:System/AmiUpdate/catalogs/german/*

regards...

michael
