URL:

There are a lot of spoofing, unfortunately I can't use acceleration because I use winuae and I can't test for this. I currently use this user-agent (blackberry):

Mozilla/5.0 (BB10; Touch) AppleWebKit/537.10+ (KHTML, like Gecko) Version/10.1.0.2342 Mobile Safari/537.10+

This should work for yt and other gmail sites etc. to upload videos etc. as well as working without opening new links

I hope it is useful.
