The only ones I'm aware of are in the list included with the driver. What exactly happens when you try to use the card?

I don't know much about the 460, but I did read that the PCIe 1x slot can't be used at the same time as the SATA port: have you previously used another card in the same slot? Alternatively, it's possible the 460 has a separate incompatibility to the one I fixed for the 440.

Also, would it be possible to try your PCI card in the 460 for comparison?
