There seems to be some attempt to fix youtube stuff by ASiegel for morphos version of an odyssey, but it probably should work on our side too, see here: [https://morph.zone/modules/newbb\\_plus/...sortorder=0&showonepost=1](https://morph.zone/modules/newbb_plus/...sortorder=0&showonepost=1)

EDIT:

Tested, for me, it sort of works. Through you have to be sure you have "<https://m.youtube.com/>" in the Allowed sites for YoutubeFullscreen Fix, as well as the same "<https://m.youtube.com/>" for Youtube HTML5 Converter in Allowed Sites too.

Then, I just spoof as iPad, then go to youtube (and it redirects me to m.youtube.com), then press on the video, it will then start streaming via CPU/Cairo, then clicking on the video where should be a gadget for resizing, that gadget will showup, pressing on which will then make it works in accelerated mode.

Through somehow works not all the time, and from time to time I had some strange errors about the unsupported protocol for "<rtsp://>".
