Can't get network connection working on 5000

URL:

After last nights success writing to here from the 5000, when I started it up this morning, I had no network connection. I thought it might have had something to do with my wonky install of the OS from the USB recovery stick, which left a number of paths showing the USB stick.

So I finally succeeded in burning a good Boot CD from the ISO at Amisphere, started from the iso, formatted the System partition, and reinstalled the OS and then installed the Enhancer 1.5 CD.

The ethernet cable is plugged into Eth0 (closest to serial) I've tried automatic and manual setup (leaving the DNS choice on dynamic setup, as it shows in my router.) No matter what I've tried, I can't get back my network/internet connection.

Any help appreciated.

Paul
