@devils\_advisor

here's mine after I moved the cable to the other port and set it up manually:

```
# DEVS:NetInterfaces/P50X0_ETH
# File generated by Dialer 53.2 (3.10.2009)
# On Saturday, 04-Jul-20 at 19:06:33
device=p50x0_eth.device
unit=1
configure=dhcp
address=192.168.1.8
netmask=255.255.255.0
```

I've configured the router to go to the specific dns servers it showed if not using DHCP. But it just says dhcp in the net interface anyway. Doing the setup on auto instead of manual didn't get anything working either.

I manually entered your info into the P50X0\_ETH configuration. But with your info it came up saying that "hardwaretype" was an invalid parameter. Same complaint about configure, but as you can see, "configure" is in my interface, too.

So frustrating not being able to do any updating or buy the RadeonRX and newer RadeonHD drivers before I go farther with the setup.

Paul
