I used to have a Sound card in the PCIe, but revert back to the sound chip on the motherboard. The Abit AW-GE870 wireless card is not showing any light when insert in a PC/Sam 460. It didn't show up in Ranger or device management.

I try the card in PC, and it do not show up, so it broken.

I will try to test it on the PCI port of the Sam 460 when I pick up the Netgear WG311 wireless card at the end of the week.
