Don't pay too much attention to the lights on the card. They are software controlled and my driver may not light them up. But if the card isn't visible in Ranger's PCI list it could be a sign of a broken card, unless the slot is deactivated (see nbache's post).

@utri007

I might be able to do that in the near future. I'm working on a new version of WirelessManager, and I could activate a simple MUI GUI that's already used in the AROS version.
