You can find an update about the state of work here:

[https://project4a.webs.com/apps/blog/e ... port-on-the-state-of-work](https://project4a.webs.com/apps/blog/e...port-on-the-state-of-work)

Here is a demo video:

[https://project4a.webs.com/apps/videos ... 80720-multitouch-amigaos4](https://project4a.webs.com/apps/videos...80720-multitouch-amigaos4)

I'm searching for Betatesters.

The touch framework is almost completed.

The video shows the preferences of the touch device used to calibrate and test the touchscreen.

Then you can see my touchbench application translating basic touch gestures to mouse events on the workbench screen.

E.g. the app produces a right mouse button press event when pressing and holding the screen for >3secs .
