so to follow up I had zero luck with the adapter and ended up trying 3 ATX PSU's and one of them snap, crackled and sparked literally leaving me screaming and in shock as I feared my beloved CS-MKIII and secondly everything else in my A4000 was fried....so luckily that wasn't the case and I ended up recapping my original PSU and all works great except now the sound is very low on both channels which I expect has something to do with fried ATX PSU and that adapter as sound was working fine before that.....one of these days I'll find the space and time to take her apart and trouble shoot sound issue but it's been a while I'm still shell shocked and relieved nothing damaged..other than sound that is
