Just tried this with a LEMMINGS3 CD, but I cannot type a colon. Other shifted keys work, I can get a semi colon. Couldn't get a colon added in the keymap either. As I cannot think I'm the only one to try that, any ideas what I'm doing wrong?

You need to download latest dosbox from os4depot, and use mapper file which come with it.

Or alternatively you can generate your own mapper file via ctrl+f1, where you can reassign things as you need
