sTix still working on giving us the latest vim with MUI GUI, and since the last discussion in this topic, there were few releases, the last of which I also uploaded on os4depot (in upload query for now).

Update worth because it for first keeping in sync with main's vim repo (so fixes and stuff on the core), and for second in the last release there was fixed issue with spawning an empty shell window on start.

Thanks to sTix for keep working on :)
