Good news, hopefully we will get some real answers.

Im still concerned the lack of Hyperion Brass presence + explanation and detailed progress of this year especially regarding commitment and AmigaOS API improvements.

Also would like to see Hyperion Entertainment seperate video from the developers themselves, just to remove any doubt that AmigaOS work not gone down to a crawl due to lack of or lowered involvement by Friedens.

Its only right to have a time slot allocated for Hyperion, even if a no show and also an empty seat to show everyone that Hyperion is welcome at their own products show.

Frankly, if Hyperion dont submit a video speech it could be seen as the ultimate disrespect for the users of its own products.

The things AmigaOS needs for 2021 are :

POSIX standards compliance

Hypervisor

Rust

Node.js

Abstract Frameworks, DOMs and developer componants.

Auto Function list to library generator

Hardware accelerated HTML and Deserialization of JSON.

Consistant open source firmware across all hardware

Self bootstrappable kernal to any alien cpu in seconds. eg CLisp and SBCL.

Time will tell at Amiwest 2020.

Keep up the great work as usual A++.
