First thank you for supporting community, this Enhancer Core was really a nice surprise.

I have Enhancer packages already, but just wanted to check the AmiSphere login for a while - when I login I get empty page with A-EON top bar telling my username: xxxxxx and nickname: and edit profile-link and some credits that I have at AmiStore... but I just cannot see anything to download.

Maybe a small note to users that 'please register the product to see it under downloads' might help, I actually had to open the PC as I thought my x5000 Odyssey had issues - but no it was just stupid user issue :)

Anyway as I had AmiSphere open I tried once again register my Personal Paint (I ordered few years back from AmigaKit) - but serial just doesn't work - whom I should contact to get updates for this PPaint CD - version? I've got one response so far just telling 'please login and register the product', but that just doesn't work...
