Thanks for the continued development of SFS. :)

I've just had a look at the complete 1.273 archive and have a few questions regarding the following tools:

SFSconfig  
SFSdefrag  
SFSobject  
SFSquery

There are two copies of the above programs in the archive. One set in the "Smartfilesystem" directory and more in the "Smartfilesystem/AmigaOS3.x" directory.

Which are the correct to use? It's left me a little confused as they have different creation dates and file sizes.

Depends on which Version of AmigaOS you are using, the executables in the Smartfilesystem directory are AmigaOS4 PPC native ones (not all, only the ones for which there are duplicates in the AmigaOS3.x directory), the executables in the AmigaOS3.x directory are m68k executables.

If you are using AmigaOS 3.x move the programs from the Smartfilesystem/AmigaOS3.x directory to Smartfilesystem (replacing the PPC ones you can't run), if you are using AmigaOS4 you can delete the AmigaOS3.x directory.
