Hi @joerg

Thanks! Wow, 1.270 was working pretty good.

What does 'ACTION\_WRITE' refer to.

I hit the 'panic button' the other day! AS IS copy the SDK directory to flash drive and crapped out in LOCAL/Perl5.85. I Locked-up into a infinite loop in the shell! Ironically, Python saved me! Questions:

Does SDK directory have sub dir. depth limits?

Does CopyDisk to USB device (FAT32) require extra parameters?
