URL:

Has anyone ever tried to compile px68k?

It is an opensource SHARP X68000 Emulator available for various platform

<https://github.com/libretro/px68k-libretro>

The X68000 was an home computer created by Sharp Corporation, first released in 1987 and practically sold only in Japan.

Still, it was a very powerfull machine at the time and have a very good collection of games including many arcade perfect conversions 😊
