Thanks for the pointers, ASL window is now usable more than once.

Some more oddities:

1)

I have no files displayed in the ASL requester window.

Is that expected, since i'm only supposed to choose the directory?

It would be better if the directory entries could be displayed, otherwise the user doesn't know if it's an empty directory in the first place.

2)

I get a crash now when choosing a directory and clicking ok in the asl requester. The asl requester goes away, but then it bombs

3) wrt to char\*

How would i get rid of it?

Simply removing the char \* within the function doesn't work.
