Oops sorry, it should be (no check for length):

```
strcpy(out, dst_str);
```

EDIT: or try a safer "strncpy(out, dst_str, dstlen);"

If you don't get a crash when CANCEL/QUIT ASI requester, maybe is the path+fiel string that has something wrong, that can mean that my changes has some bug on it.

Is there a way I can get your sources/changes to recompile and see what happens. Do you use crosscompiler/cygnix/amigaos4/...
