Do you need the file or just only the (full)path?

This part of code (already in your sources) adds the filename to the (full)path, only when isDirBrowser is FALSE(-1):

```
Common::DialogManager::DialogResult AmigaOSDialogManager::showFileBrowser(const Common::U32String &title, Common::FSNode &choice, bool isDirBrowser) {
```

```
...  
    if (!isDirBrowser) {  
        IDOS->AddPart(pathBuffer, fr->fr_File, sizeof(pathBuffer));  
    }  
...  
}
```
