Thank you very much. With the above i don't get anymore warnings.

The longer i look at the code the less i know.

There was a warning about a cast from const to char and with your solution it works, the warning is gone, but isn't that exactly what we are doing now?

casting a const char to a char???

```
char *AmigaOSDialogManager::utf8ToLocal(const char *in) {
```

I don't understand...
