Hmm, do you have a link to the future SDK fix?

Not talking about a binary, but a sdl github FR or similar?

I could add that to the bug report and maybe someone will get back to me about a temporary workaround?

Talking about linux builds...

Would a linux build help with the shared objects crash or is that a sole AmigaOS implementation flaw?

Sorry, jumping topics here.

Still looking for a way to work around that dreaded crash

Thanjs a bunch
