I did use 2x Philips Brilliance 288P monitors with my AmigaOne 500/X1000.

They can display the Workbench with UHD ( 3840x2160 pixels) , but increasing the font size is recommended in that resolution.

1080P is also crystal clear: <https://www.youtube.com/watch?v=BN3CGz0FVfc>

If you plan to use 1440P ( 2560x1080 pixels ), I would recommend buying a monitor which displays it natively like the LG or Asus mentioned.
