Start it 😊

It never opens a window, just does stuff in the background and bombs.

Hmm, debug version, where did i put the debug version...

I'll look for it and report back

Edit2: Nevermind...i should get new glasses

Edit:

I have the debug version for static builds ".a", but i can't find one for shared builds...as this is a shared build i guess it would make sense using a shared libSDL2.debug...wouldn't it?
