Hi,

I only tried the Cinemaware titles that came as part of Final CD.

I could have sworn they worked at one time. I only recently pulled the X5000 out of storage and went to show one of my favorites to daughter.

I tried to update the various bits like E-UAE and WHLOAD but that made it worse they just crashed.

I'll try and grab a simple ADF title and see if I can just run that.

Part that is weird is they all behave same way. The intro's play then just empty screen. I can exit E-UAE and shut it all down.

I'm stumped.
