Where to buy a PCI-E power cord for graphics card?

Hi,

I bought a second-hand Gigabyte R9 270C graphics card for my Amiga X1000. Unfortunately, it seems that the card needs 2 PCI-E power cords while the Amiga X1000 had only one packaged with it. The power supply has free 8-pin socket and the other end of the cord has 6 pin socket. It seems it's quite hard to find similar cords here in Finland with the needed length (ca 17 cm / 7 in). I tried to contact Amiga Kit via the web form and email, but I haven't got any answers. Does anyone know where one could find these cords?

Marko
