I have a Sam640ex with Radeon HD 6450 (AMD Sapphire) card and I just bought Enhancer Plus so i could get access to driver version 2.22, which fixed all the problems I was having with version 1 of that driver that my second hand Sam came with. It seems my card is not powerful enough to run Warp 3D Nova, and I don't want to change it for a noisy, hot, large card as my current one is silent, low power and fits in my compact case. But I would upgrade to the latest version anyway, if only I could figure out how! Something to do with Amisphere, but not clear what one needs to do!
