Well well...

So it was audio drivers...

From my serial logs...

```
dev_open(unitNumber=0) [DH0/NGFileSystem 54.34 ]
dev_open(unitNumber=0) [DH1/NGFileSystem 54.34 ]
dev_open(unitNumber=0) [DH2/NGFileSystem 54.34 ]
[RAM] Handler has started successfully. [DebugLevel=5]
CMI8738 found! :-)
CS4281 DRIVERINIT
No card present.
No Envy24 found! :-(-
No FM801 found! :-(-
No SB128 found! :-(-
No SOLO_ONE found! :-(-
No cards found! :-(-
```

I move the CS4281 driver to a backup folder and rebooted..

```
dev_open(unitNumber=0) [DH0/NGFileSystem 54.34 ]
dev_open(unitNumber=0) [DH1/NGFileSystem 54.34 ]
dev_open(unitNumber=0) [DH2/NGFileSystem 54.34 ]
[RAM] Handler has started successfully. [DebugLevel=5]
CMI8738 found! :-)
No Envy24 found! :-(-
No FM801 found! :-(-
No SB128 found! :-(-
No SOLO_ONE found! :-(-
No cards found! :-(-
```

Now it works fine. So now what is difference between these drivers?

Regards  
Doug
